On Inauguration Day, President Joe Biden wasted no time in taking action, signing 17 executive orders. For those of us who care deeply about our wild forests, one piece in particular got us clapping. Public Lands Campaign Director Len Montgomery explains.

President Biden directed the U.S. Department of Agriculture to immediately review restoring “roadless area” protections for our largest national forest: the vast, old-growth Tongass National Forest in southeast Alaska. It’s the world’s largest intact temperate rainforest, nicknamed “America’s Amazon” for its ancient trees and rich biodiversity.

What are “roadless area” protections? Twenty years ago, the Clinton administration finalized a key rule that protected wild areas in our national forests. Following public comments from 1.6 million Americans (many of which our national network’s advocates helped collect), the regulation, which protected still-wild areas of our national forests from “road construction, road reconstruction and timber harvesting,” safeguarded a whopping 58.5 million acres.

Known as the Roadless Rule, this important conservation tool has ensured that our wildest and most awe-inspiring spaces haven’t suffered from traffic, vehicle noise pollution, or water pollution from vehicle oil and grease. Beyond that, the Roadless Rule protects these acres from industrial timber harvesting, so our forests can grow naturally—allowing different-aged trees to grow near one another and undergrowth to thrive. The larger the roadless area, the more uninterrupted habitat there is for wildlife.

This is particularly important for species that need larger areas to roam, such as wolverines and mountain lions. The Roadless Rule has also helped protect prime backcountry recreation land, much to the delight of hikers, climbers, fishing enthusiasts, snowshoers and cross-country skiers.

For people adjacent to these important areas, this protection is priceless. The U.S. Forest Service reported more than 149 million visits to national forests in their fiscal year 2019, and nearly half of all visitors came from within 50 miles of those public lands.

Whole Foods earned an ‘F’ on plastic packaging. We’re urging it to do better.

Whole Foods touts its commitment to "planet before profits." But to live up to that claim, it’ll need to deal with its contribution to the plastic pollution crisis.

Right now, it’s not doing enough. A report by the environmental shareholder advocacy group As You Sow gave the grocer an "F" grade for its policies on single-use plastic packaging. On setting goals to reduce its unnecessary plastic waste, as well as transparency on those efforts, Whole Foods fell behind Target, Kroger and Walmart.

“Our wildlife, oceans and communities are choking on plastics and deserve better,” said Kelsey Lamp, director of our national research partner Environment America Research & Policy Center’s Protect Our Oceans campaign. “We must prioritize wildlife over waste, and we should expect more from a grocer known for its environmental vision.”

Environment Texas Research & Policy Center is calling on Whole Foods to lead by example by eliminating single-use plastic packaging from store shelves.

Environment Texas releases bold environmental agendas for Austin, Dallas, San Antonio, Houston

With bold action, four Texas cities could have an outsized effect on protecting our environment.

In February, Environment Texas released agendas for four cities in the state: Austin, Dallas, Houston and San Antonio. In recent years, these cities have demonstrated their environmental stewardship, but now, Environment Texas is challenging the cities to improve their clean energy initiatives, bolster clean air and water protections, and put wildlife over waste by banning the worst single-use plastics.

“Every day, we see more heartbreaking evidence of the damage being done to our planet: climate change, plastic pollution, wildlife disappearing forever,” said Environment Texas Executive Director Luke Metzger. “But we also see the solutions all around us, such as solar and wind power, electric cars and buses, more walkable and ‘bikeable’ cities, and reusing and repairing stuff instead of throwing it away.”

Environment Texas will continue its work to win environmental victories on our path toward a cleaner, greener future for Texas.

Federal government expands priceless marine sanctuary off Texas coast

For marine wildlife in the Gulf of Mexico, it’s just one step forward—but hopefully, it’s the first of many.

On Jan. 19, the National Marine Fisheries Service announced that Texas’ Flower Garden Banks National Marine Sanctuary will be tripled in size. While the public had preferred an even larger expansion, the change is welcome for a vital marine ecosystem that includes underwater mountains covered in coral and is home to sea turtles, sharks and the world’s only known manta ray sanctuary.

“Every step we take to protect these beautiful ecosystems is a victory for the manta rays, sea turtles and hammerhead sharks that call our Gulf home,” said Anna Farrell-Sherman, Environment Texas Research & Policy Center clean water associate. “We hope this announcement becomes the first in a string of victories for protecting our oceans.”

Environment Texas Research & Policy Center and our national network have advocated for Flower Garden Banks’ expansion for years.

That means locals’ full enjoyment of these natural spaces are, in part, dependent on this rule. Whether you’re heading off with fishing poles, hiking gear or a backcountry permit, this regulation means you can truly and fully lose yourself in nature for a couple hours or a few days.

But the full application of the Roadless Rule was put into question in October 2020. The Trump administration finalized a decision that removed these protections from the Tongass National Forest, often called the “crown jewel” of the national forest system.

Now, President Biden has started the process of rectifying that ill-conceived decision. With the president’s executive order, the Forest Service will review the previous administration’s decision. Assuming that agency decides the rollback was a bad call, it will likely need to begin a new rulemaking process to reinstate the rule.

To avoid the yo-yo effect of one president rescinding and another reinstating protections for wild areas in our national forests, Congress must pass the Roadless Area Conservation Act. Doing so would upgrade the Roadless Rule from an agency regulation into an enshrined law. This would protect it from political winds and ensure that it, along with the Clean Air Act and Clean Water Act, serves as a staple of America’s commitment to protecting our health and wild places.

The Roadless Rule has saved wildlife, preserved clean water sources, and provided the stage for thousands of hours of recreation and outdoor endeavors for the last 20 years. We must keep it that way for generations to come.

By Ellen Montgomery, Director, Public Lands Campaign

Thank you for supporting our work to take on the vast environmental challenges we face and to create a greener, healthier, more sustainable world. In these pages, you'll find the stories of the advocacy you made possible.

Your action and support allow us to keep working for a better world. Thank you.

Luke Metzger
Executive Director

In a video our national network released in February, former staff, canvassers and advocates talked about their work on our 2000 campaign to save the Tongass and millions more acres of national forest.
Environment Texas calls on Amazon to stop the sale of bee-killing pesticides

To save the bees, we’re asking one of the world’s biggest retailers to stop selling the pesticides that kill them.

In March, Environment Texas, along with our national network, kicked off our campaign to call on Amazon to take neonicotinoid pesticides (or “neonics”)—the substances most closely linked to a troubling decline in bee populations over the past two decades—off their (virtual) shelves. Our ask is far from unprecedented: Home Depot and Lowe’s have already pledged to phase out the use of neonics on their live plants, and Lowe’s has committed to taking the pesticides off its shelves altogether.

“We need to reduce the use of this pesticide that’s contributing to the collapse of our most important pollinators,” said Malia Libby, Save the Bees campaign associate with our national partner, Environment America. “Amazon should join other retailers in doing the right thing and taking it off its shelves.”

Our national network will be gathering petition signatures from thousands of people this summer calling on Amazon to act.

Studies show that dangerous herbicide use plays a significant role in bee die-offs.
